

**UNITED STATES INTELLIGENCE BOARD
SECURITY COMMITTEE**

SECOM-D-81
1 July 1975

MEMORANDUM FOR: Deputy to the DCI for the Intelligence
Community

SUBJECT : DCID 1/14 -- Uniform Personnel Security
Standards and Practices Governing Access
to Sensitive Compartmented Information

1. The Security Committee has completed a revision of DCID 1/14 (tasked in LOI) with NSA non-concurring in the revision. However, I propose not submitting 1/14 to the DCI and USIB for consideration at this time in view of the information set forth below.

2. The Security Committee has now been tasked with review of compartmentation procedures with the goal of determining that information which must be held tightly in compartmented channels and the information which should be taken out of compartmentation and protected by classification procedures under Executive Order 11652.

3. A working group has almost completed (we hope to have it done by September 1975) a comprehensive study of a Community Computer-Assisted Compartmentation Control System. This system looks feasible, appears cost-effective and hopefully would prove of benefit to the intelligence community.

4. I believe these three matters (DCID 1/14, the compartmentation procedures study and the Community Computer-Assisted Compartmentation Control System study) should be considered together. I would expect the Security Committee to analyze all and submit them to the DCI and USIB in proper order, tying each one to the other and allowing the Board to make recommendations to the DCI which could result in a smaller,

MORI/CDF

tighter, less burdensome and more effective compartmentation system.

5. If you concur, the revised DCID 1/14 will not be submitted for consideration at this time.
